Flexibility

Mix and match fiber ports with twisted pair ports. Three module slots are available for the installation of 900 Series expansion modules providing maximum flexibility. Up to 24 twisted pair 10/100BaseTX or 12 100BaseFX fiber ports can be installed with multiple combinations available in between. Any expansion module can be installed in any slot.

Industrial Packaging and Specifications

The 900B is designed to operate in industrial environments. It is housed in a rugged steel enclosure and standard 35mm DIN-RAIL mounting. An Optional kit is available for rackmount applications. Like all N-TRON products, the 900B comes standard with extended temperature ratings, extended shock and vibration specs, redundant power inputs, and a high MTBF.

Ease of Use

The 900B is a plug and play device. No configuration is required. All 10/100BaseTX ports are auto sensing and auto configuring. Each port is automatically set for maximum speed and performance. In addition, each twisted pair port has an Auto MDIX feature, eliminating the need for crossover cables.

LED's are provided to display the link status and activity of each port as well as power on/off status.

Performance

The 900B uses "state of the art" Ethernet switching technology. This eliminates network collisions and increases network determinism. Up to 12,000 MAC addresses (4,000 per module) are supported enabling sophisticated and complex network architectures. A backplane speed of 2.6 Gb/s allows full wire speed capability on all ports simultaneously.

N-View OPC Switch Monitoring Option

The N-TRON N-View OLE for Process Control (OPC) Server Software can be combined with popular HMI software packages to add network traffic monitoring, trending and alarming to any application using N-TRON switches configured with the N-View option. N-TRON's N-View OPC Server collects 41 different traffic variables per port and 5 system level variables per switch. This information can provide a complete overview of the network load, service quality, and packet traffic. OPC client software can use N-View OPC Server data to resolve network problems quickly and improve system reliability.
